Management Information Systems
Assignment- Week 1
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

1. What is the primary goal of MIS?

   a. Increase hardware sales
   b. Generate raw data
   c. Transform data into useful information for decision-making
   d. Replace managers

   Ans c

2. Which of the following represents the correct hierarchy?

   a. Wisdom → Knowledge → Information → Data
   b. Data → Information → Knowledge → Wisdom
   c. Information → Data → Wisdom → Knowledge
   d. Knowledge → Data → Information → Wisdom

   Ans b

3. Data can best be described as:

   a. Processed facts
   b. Meaningful insights
   c. Raw facts and figures
   d. Strategic decisions

   Ans c

4. Information is:

a. Unprocessed data
b. Data arranged in a meaningful form
c. A collection of hardware devices
d. Organizational culture

Ans b

5. Which activity captures raw data in an information system?

a. Processing
b. Feedback
c. Input
d. Output

Ans c

6. Which activity converts raw data into meaningful information?

a. Feedback
b. Processing
c. Input
d. Distribution

Ans b

7. The output of an information system is primarily used for:

a. Data collection
b. Data storage
c. Decision-making and actions
d. Hardware maintenance

Ans c

8. Feedback in an information system is used to:

a. Increase storage capacity
b. Correct or evaluate inputs
c. Replace processing
d. Eliminate outputs

Ans b

9. Computers and software are considered:

a. Complete information systems
b. Organizational assets
c. Technical foundations of information systems
d. Decision makers

Ans c

10. Which technology trend is highlighted as transforming business?

a. Typewriters
b. Mobile digital platforms
c. Telegraph systems
d. Mechanical calculators

Ans b

NPTEL Online Certification Courses

Management Information Systems
Assignment- Week 2
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

1. What is the smallest unit of data a computer can handle?

a. Byte
b. Field
c. Bit
d. Record

Ans c

2. A collection of related files is known as:

a. Record
b. Field
c. Database
d. Byte

Ans c

3. An entity can be best described as:

a. A software package
b. A person, place, or thing about which data is stored
c. A collection of records
d. A database query

Ans b

4. Which of the following is an attribute of a STUDENT entity?

a. Database
b. Grade
c. Folder
d. File

Ans b

5. Data redundancy refers to:

a. Missing data
b. Duplicate data stored in multiple files
c. Incorrect data entry
d. Unauthorized access

Ans b

6. Data inconsistency occurs when:

a. Data is encrypted
b. Data is stored in a warehouse
c. Same attribute has different values
d. Data is normalized

Ans c

7. A primary key is used for:

a. Data backup
b. Data compression
c. Unique identification of records
d. Data mining

Ans c

8. A DBMS acts as:

a. A spreadsheet tool
b. An interface between applications and databases
c. A programming language
d. A web browser

Ans b

9. One major advantage of DBMS is:

a. Increased redundancy
b. Reduces inconsistency
c. Reduced storage capacity
d. Decentralized security

Ans b

10. Which is a major BI tool?

a. OLAP
b. Compiler
c. Antivirus
d. Browser

Ans a

Management Information Systems
Assignment- Week 3
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

1. SAP stands for:

   a. Systems Applications & Products in Data Processing
   b. Standard Applications Processing
   c. Systems and Products Platform
   d. Software Applications Processing

Ans a

2. SAP R/3 follows:

   a. Two-tier architecture
   b. Four-tier architecture
   c. Three-tier architecture
   d. Single-tier architecture

Ans c

3. In SAP R/3, GUI components belong to:

   a. Database layer
   b. Application layer
   c. Presentation layer
   d. Middleware layer

Ans c

4. A key business benefit expected from ERP is:

   a. Increased inventory levels
   b. Integrated supply chain management
   c. Increased manual effort
   d. More isolated systems

Ans b

5. ERP helps reduce:

a. Order-to-cash cycle time
b. Data availability
c. Productivity
d. Automation

Ans a

6. ERP facilitates:

a. Business Process Reengineering (BPR)
b. Data duplication
c. Information silos
d. Stand-alone processing

Ans a

7. ERP affects:

a. Business processes
b. Company culture
c. Employee skills
d. All of the above

Ans d

8. ERP can reduce costs through:

a. Better supplier management
b. Increased redundancy
c. More manual work
d. Separate purchasing systems

Ans a

9. A common reason for ERP project risk is:

a. Strong top management support
b. Inexperienced core team
c. Stable requirements
d. High computer literacy

Ans b

10. A limitation of traditional MRP was:

a. Lack of planning capability
b. Ignoring available capacity during planning
c. Too much HR integration
d. Real-time collaboration

Ans b

NPTEL Online Certification Courses

Management Information Systems
Assignment- Week 4
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

1. SCM involves which two major flows?

   a. Product and profit flow
   b. Material flow and information flow
   c. Cash flow and tax flow
   d. Labor flow and energy flow

Ans b

2. A supply chain is best described as a:

   a. Single manufacturing unit
   b. Distribution warehouse
   c. Network of resources, organizations, technologies, and processes
   d. Marketing department

Ans c

3. One method of reducing the bullwhip effect is to:

   a. Increase batch sizes
   b. Improve communication across the supply chain
   c. Reduce information sharing
   d. Increase shortages

Ans b

4. Demand-driven supply chains use a:

   a. Push system
   b. Pull system
   c. Manual system
   d. Forecast-only system

Ans b

5. In a Just-in-Time (JIT) strategy, components arrive:

a. Months before production
b. After product delivery
c. As they are needed
d. At fixed yearly intervals

Ans c

6. Which supply chain consists of suppliers and suppliers' suppliers?

a. Internal supply chain
b. Downstream supply chain
c. Upstream supply chain
d. Retail supply chain

Ans c

7. The downstream supply chain focuses on:

a. Raw material suppliers
b. Internal warehouses
c. Product delivery to customers
d. Employee management

Ans c

8. Internal supply chain activities occur:

a. Between countries
b. Inside the factory
c. Only with customers
d. Only with suppliers

Ans b

9. The bullwhip effect occurs when:

a. Inventory is eliminated
b. Demand information gets distorted along the supply chain
c. Production exceeds quality standards
d. Warehouses are automated

Ans b

10. A push-based model is also known as:

    a. Build-to-order
    b. Build-to-stock
    c. Demand-driven
    d. Pull-based

Ans b

NPTEL Online Certification Courses

Management Information Systems
Assignment- Week 5
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

1.
A company manufactures customized industrial machinery only after receiving confirmed customer orders. This production strategy is best classified as:

a. Make-to-stock
b. Continuous production
c. Make-to-order
d. Batch processing

Ans c

2.
In a manufacturing information system, which document formally authorizes the start of production?

a. Goods receipt note
b. Production order
c. Sales quotation
d. Purchase requisition

Ans b

3.
Which of the following would be considered a tactical information requirement for manufacturing management?

a. Long-term product design decisions
b. Factory location planning
c. Quality control measures
d. Corporate acquisition strategy

Ans c

4.
A production manager wants to identify the optimal product mix under limited machine capacity. This decision falls under:

a. Strategic information
b. Tactical information
c. Operational information
d. Transaction processing

Ans b

5.
Which statement best explains the difference between independent and dependent demand?

a. Independent demand is derived from BOM requirements.
b. Dependent demand originates directly from customer demand.
c. Independent demand is determined by market demand, while dependent demand is derived from it.
d. Both are determined by suppliers.

Ans c

6.
The Bill of Materials (BOM) primarily serves as:

a. A financial statement
b. A hierarchical listing of components needed to manufacture a product
c. A quality inspection report
d. A vendor evaluation document

Ans b

7.
Which MRP input specifies when finished products must be completed?

a. Inventory records
b. Capacity plan
c. Master Production Schedule
d. Routing sheet

Ans c

8.
Capacity Requirement Planning (CRP) is mainly concerned with:

a. Forecasting demand
b. Determining whether sufficient production capacity exists
c. Designing new products
d. Monitoring customer satisfaction

Ans b

9.
Which technology allows engineers to visualize and test products before physical prototypes are built?

a. ERP
b. SPC
c. CAD
d. CRM

Ans c

10.
A major advantage of additive manufacturing over traditional manufacturing is:

a. Elimination of all design costs
b. Rapid prototyping with minimal tooling
c. Reduced need for digital designs
d. Lower computing requirements

Ans b

NPTEL Online Certification Courses
Indian Institute of Technology Kharagpur

Management Information Systems
Assignment- Week 6
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

1 The primary objective of a Marketing Information System (MKIS) is to:

a. Automate payroll processing
b. Support marketing decision-making through relevant information
c. Manage production schedules
d. Monitor employee attendance

Ans b

2. In the marketing research process, data collection should occur:

a. Before defining the problem
b. After implementing recommendations
c. After defining objectives and research questions
d. Before identifying information needs

Ans c

3.
Which subsystem continuously scans the external environment for information on competitors and market trends?

a. Internal Reports Subsystem
b. Marketing Intelligence Subsystem
c. Pricing Subsystem
d. Sales Forecasting Subsystem

Ans b

4.
A company uses customer demographics, purchasing history, and psychographic data to identify target segments. This information comes primarily from:

a. Customer databases
b. Payroll records
c. SPC systems
d. Capacity planning systems

Ans a

5. Which forecasting method relies most heavily on historical sales patterns?

a. Delphi technique
b. Scenario planning
c. Time-series analysis
d. Expert panels

Ans c

6. The greatest advantage of Sales Force Automation is:

a. Eliminating customer interactions
b. Instant access to organizational information during selling activities
c. Replacing marketing research
d. Reducing product quality costs

Ans b

7. Before a sales order is confirmed, organizations commonly perform:

a. Employee screening
b. Credit verification
c. Vendor rating
d. Capacity auditing

Ans b

8. Which activity immediately follows picking and packing in the sales distribution process?

a. Recruitment
b. Payroll approval
c. Transportation and shipment arrangement
d. Vendor evaluation

Ans c

9. The primary purpose of Accounts Receivable is to:

a. Manage supplier payments
b. Track money owed by customers
c. Maintain payroll records
d. Monitor inventory

Ans b

10.

A customer returns damaged goods after invoicing. Which accounting document is most likely generated?

a. Debit note
b. Purchase requisition
c. Inspection certificate
d. Credit note

Ans d

NPTEL Online Certification Courses

Management Information Systems
Assignment- Week 7
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

1. Business strategy is a function of:

   a. Competition, Positioning, and Capabilities
   b. Hardware, Software, and Data
   c. Revenue, Cost, and Profit
   d. Customers, Vendors, and Employees

Ans a

2. Which model is used for organizational design?

   a. SWOT Matrix
   b. Business Diamond
   c. BCG Matrix
   d. Ansoff Matrix

Ans b

3. The Business Diamond consists of:

   a. Finance, Marketing, HR, Operations
   b. Hardware, Software, Network, Data
   c. People, Structure, Tasks, Information Control
   d. Cost, Quality, Time, Flexibility

Ans c

4. Which is NOT an IS infrastructure component?

   a. Hardware
   b. Software
   c. Network
   d. Advertising

Ans d

5. Changing one corner of the IS Strategy Triangle requires:

a. No action
b. Evaluating the other two corners
c. Hiring more staff
d. Increasing profits

Ans b

6. Strategic Systems Analysis examines:

a. Industry structure and competitive forces
b. Employee attendance only
c. Payroll systems only
d. Accounting records only

Ans a

7. Balanced Scorecard (BSC) focuses on:

a. Only financial performance
b. Four dimensions of performance
c. Employee salaries
d. Product prices only

Ans b

8. Which is NOT one of the four BSC dimensions?

a. Customer
b. Financial
c. Business Process
d. Manufacturing Capacity

Ans d

9. KPIs in a BSC are:

a. Key Performance Indicators
b. Knowledge Processing Instructions
c. Key Product Integrators
d. Knowledge Performance Interfaces

Ans a

10. BSC helps managers focus on:

a. Strategic vision
b. Office administration only
c. Accounting entries only
d. Legal compliance only

Ans a

Assignment- Week 8
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

1. E-commerce refers to:
   a. Physical transactions only
   b. Digitally enabled commercial transactions involving exchange of value
   c. Internal organizational communication
   d. Manufacturing automation

Ans b

2. Which feature of e-commerce allows access to markets anytime and anywhere?
   a. Richness
   b. Interactivity
   c. Ubiquity
   d. Customization

Ans c

3. The ability of e-commerce to reach across national boundaries is known as:
   a. Information density
   b. Global reach
   c. Personalization
   d. Interactivity

Ans b

4. Information density in e-commerce means information is:
   a. Limited and costly
   b. Plentiful, cheap, and accurate
   c. Only available to firms
   d. Difficult to access

Ans b

5. Adjusting marketing messages based on a customer's clickstream behavior is called:
   a. Customization
   b. Segmentation
   c. Personalization
   d. Automation

Ans c

6. Changing a delivered product based on user preferences is known as:
   a. Personalization
   b. Customization
   c. Standardization
   d. Diversification

Ans b

7. Amazon is an example of which type of e-commerce?
   a. B2B
   b. C2C
   c. B2C
   d. G2C

Ans c

8. IndiaMART is primarily an example of:
   a. B2B e-commerce
   b. C2C e-commerce
   c. Social commerce
   d. Mobile commerce

Ans a

9. Which of the following is a major challenge in e-commerce?
   a. Global reach
   b. Personalization
   c. Trust issues
   d. Richness

Ans c

10. Which key element of a business model answers “How to earn money?”
   a. Market strategy
   b. Competitive advantage
   c. Revenue model
   d. Market opportunity

Ans c

NPTEL Online Certification Courses
Indian Institute of Technology Kharagpur

Management Information Systems
Assignment- Week 9
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

Question 1:

Which of the following is not a benefit of cloud computing?

a. Usage-based pricing
b. Resource Pooling
c. Increased Set-up Time
d. Measured Use

Ans c

Question 2:

Salesforce.com's CRM software is an example of which cloud service model?

a. IaaS
b. PaaS
c. SaaS
d. DaaD

Ans c

Question 3:

FinTech Solutions Inc. is developing a new customer-facing analytics portal. To accelerate their release timeline, they decide to use a cloud-based environment where the vendor hosts the runtime, libraries, testing tools, and plugins. To securely expose this platform's API to their internal network, they implement cloud-native security groups, web application firewalls, and encrypted virtual private cloud (VPC) peering.

Which cloud service model is FinTech Solutions utilizing for this analytics portal, and who is fundamentally responsible for ensuring the availability, bandwidth, and security at the hypervisor layer?

a. PaaS; The Cloud Vendor is responsible for the underlying infrastructure capacity, virtual networking, and hypervisor security.
b. PaaS; The Client manages the physical hardware, while the Cloud Vendor manages capacity.
c. SaaS; The Cloud Vendor manages only the application logic, while the Client manages all security and networking.
d. SaaS; The Cloud Vendor and Client share the hypervisor layer responsibility.

Ans a

Question 4:

GlobalHealth Inc. uses its own dedicated, single-tenant servers to securely store highly sensitive patient data. To handle unpredictable spikes in public appointment bookings, the company temporarily offloads web traffic to a globally shared network.

What cloud deployment model does GlobalHealth Inc. utilize?

a. Public cloud
b. Community cloud
c. Private cloud
d. Hybrid cloud

Ans d

Question 5:

Tools or mechanisms that can change their own state and/or the state of other devices and machines are called _____.

a. Sensors
b. IoT
c. Actuators
d. Proximity Sensor

Ans c

Question 6:

Which of the following best describes the core approach of Privacy by Design?

a. Applying privacy settings as an optional add-on near the end of a project's development
b. Proactively considering privacy objectives from the start and throughout the design and delivery
c. Reacting to data breaches by applying immediate remedial software patches
d. Allowing users to manually select every privacy feature from a complex menu

Ans b

Question 7:

What is the primary function of a sensor in an IoT system?

a. To convert an electrical signal into a physical action
b. To capture environmental data and convert it into an electrical signal
c. To store massive amounts of data in the cloud
d. To provide power to the IoT device

Ans b

Question 8:

Which of the following statements accurately describes an Outsourced Private Cloud?

a. It is implemented solely within the customer's own premises.
b. The server side is managed by a hosting company.
c. It is designed and shared to serve the general public.
d. The infrastructure is always owned and operated by the customer's internal IT team.

Ans b

Question 9:

A retail e-commerce giant is consolidating multiple distinct data streams from their 2026 Black Friday campaign to predict consumer churn. They aggregate:

Stream A: Real-time customer heartbeats and biometric data streams from wearable synced smartwatches (binary files and sensor signals).

Stream B: Text reviews, complaints, and emojis posted across multiple social media platforms.

Stream C: Structured relational transaction logs (JSON and SQL format). During the analysis, the data engineering team discovers that 15% of the smartwatch streams have missing timestamp intervals and that 20% of the social media data is generated by spam bots misrepresenting product satisfaction.

Which of the following best diagnoses the system's challenges by correctly applying the concepts of Variety and Veracity?

a. The integration of wearable devices, social media, and transactional logs represents a Variety challenge, while timestamp gaps and spam bots represent a Veracity challenge.
b. The data format differences between binary files, text, and JSON represent a Veracity challenge, while missing timestamps in the wearable data represent a Variety challenge
c. The integration of different platforms (sensors, social media, SQL) represents a Veracity challenge, while the presence of bot spam and missing intervals both strictly represent Variety issues
d. Both the format differences (Stream A, B, C) and the missing intervals are examples of Variety**,** whereas the presence of bot spam is an example of Veracity.

Ans a

Question 10:

Which among the following is a cloud service provider?

a. Netflix
b. JioHotstar
c. Reliance Digital
d. DigitalOcean

Ans d

NPTEL Online Certification Courses
Indian Institute of Technology Kharagpur

Management Information Systems
Assignment- Week 10
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

Question 1:

_____ is the collective and individual experience of applying knowledge to the solution of problem; knowing when, where, and how to apply that knowledge.

a. Cognition
b. Wisdom
c. Tacit
d. Culture

Ans b

Question 2:

A retail manager uses an IT system that instantly pulls historical sales data and expert staff insights to determine the best price for a new product line. Which system is being used to practically apply organizational knowledge and add ROI to this decision?

a. Transaction Processing System
b. Office Automation System
c. Supply Chain Management System
d. Decision Support System (DSS)

Ans d

Question 3:

Which of the following best describes a primary difference between a Neural Network and a Genetic Algorithm in organizational knowledge management?

a. Genetic Algorithms are used to discover hidden patterns in data, whereas Neural Networks are used to evaluate alternative solutions.
b. Neural Networks are used to discover patterns in data, whereas Genetic Algorithms are used to evaluate and optimize alternative solutions.
c. Neural Networks rely on Darwinian evolution, while Genetic Algorithms rely on human nervous system models.
d. Both act identically but process data sequentially rather than in parallel.

Ans b

Question 4:

Which scenario best illustrates a semi-structured decision type?

a. Adjusting the monthly production output purely according to historical seasonal sales data.
b. Formulating an annual corporate budget by rigidly enforcing standard inflation-adjusted formulas.
c. Determining the most cost-effective customized delivery route for a new, irregularly shaped geographical zone.
d. Approving a standard expense report that strictly complies with the published company travel policy.

Ans c

Question 5:

Which of the following is not a phase in a decision-making process?

a. Intelligence
b. Design
c. Choice
d. Scope

Ans d

Question 6:

According to the principles of Management Information Systems, which type of decisions do Executive Support Systems (ESS) primarily address?

a. Routine and highly structured operational decisions
b. Non-routine decisions requiring judgment, evaluation, and insight
c. Strictly day-to-day tactical management decisions
d. Pre-programmed, repetitive transaction processing

Ans b

Question 7:

Which of the following statements best defines object-based knowledge representation for expert systems?

a. Knowledge is represented as simple true/false statements without any attached data.
b. Knowledge is represented as a network of objects, where each object contains both data and the methods that act on that data.
c. Knowledge is strictly stored as a sequential list of procedural algorithms.
d. Knowledge is represented purely through unstructured text files.

Ans b

Question 8:

A local hospital is using an AI expert system to help emergency doctors diagnose patients with severe respiratory distress. When a patient arrives, the doctor first inputs specific symptoms (e.g., sudden fever, dry cough, and shortness of breath) into the system. The inference engine immediately analyzes these available facts, checks them against thousands of nested medical rules, and progressively infers potential conditions and treatment options until it derives a set of probable diagnoses.

Based on how the inference engine processes the data, which reasoning strategy is the system using?

a. Backward Chaining
b. Goal-Driven Analysis
c. Breadth-First Deductive Reasoning
d. Forward Chaining

Ans d

Question 9:

What do the letters in the acronym **MOODLE** stand for?

a. Modern Object-Oriented Dynamic Learning Environment
b. Modular Object-Oriented Dynamic Learning Environment
c. Managed Open Online Distance Learning Experience
d. Modular Open Online Digital Learning Engine

Ans b

Question 10:

Which type of managerial decision is routine, repetitive, and follows a predefined set of rules or standard operating procedures?

a. Semi-structured
b. Unstructured
c. Structured
d. Analytical

Ans c

NPTEL Online Certification Courses
Indian Institute of Technology Kharagpur

Management Information Systems
Assignment- Week 11
TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

Question 1:

Which of the following statements regarding the Right to Privacy is false?

a. It involves the right to be left alone and free from unreasonable personal intrusions.
b. It is an absolute right that takes total precedence over the needs of society.
c. It must be balanced against the broader needs and interests of society.
d. The public's right to know is often considered superior to an individual's right to privacy.

Ans b

Question 2:

What are computer cookies, as described in web technology?

a. Small text files deposited on a computer's hard drive to identify and track visits
b. Hidden software applications that delete a user's browsing history
c. Programs used by hackers to steal personal passwords
d. Temporary internet cables that connect to web servers

Ans a

Question 3:

Zenith Corp implements a new Information System (IS) that tracks keystrokes, active window times, and web browsing habits. During the rollout, management announces that the system will generate random, automated performance audits, but the exact tracking schedule is kept strictly confidential. Initially, a few remote workers attempt to browse non-work-related websites during business hours. However, realising the logging software could be recording their activity at any given minute, employees began limiting their computer use strictly to corporate tasks.

Which of the following best explains why Zenith Corp employees consistently conform to company policies despite the lack of a visible or constant human supervisor?

a. Hawthorne Effect
b. The Panopticon Effect
c. Groupthink
d. Cognitive Dissonance

Ans b

Question 4:

Which of the following best describes the primary objective and function of a Man-in-the-Middle attack?

a. It overloads a target server's resources to cause a sudden disruption in legitimate user access.
b. It secretly intercepts, reads, and potentially alters communications between a sender and a recipient without their knowledge.
c. It tricks users into downloading and installing malicious software disguised as legitimate applications.
d. It guesses passwords by systematically trying thousands of combinations until the correct one is found.

Ans b

Question 5:

Which of the following cyber threats uses manipulative communication—such as bogus emails or messages—as its primary delivery method to steal an identity?

a. Pharming
b. DNS Cache Poisoning
c. Malware Encryption
d. Phishing

Ans d

Question 6:

Which of the following is the full form of VPN?

a. Visual Private Network
b. Virtual Private Node
c. Virtual Private Network
d. Visual Private Node

Ans c

Question 7:

A major server outage brings down the primary database for GlobalTech Solutions, instantly preventing their customer service team from accessing client records. While the IT department works on restoring the servers from the latest backup, the management team activates a backup procedure allowing agents to manually process urgent client requests using printed logs and temporary phone lines.

In this scenario, which plans were demonstrated by the IT department and the management team, respectively?

a. Both the IT team and management demonstrated the Disaster Recovery Plan (DRP)
b. Both the IT team and management demonstrated the Business Continuity Plan (BCP)
c. The IT team demonstrated the Business Continuity Plan (BCP)**,** and management demonstrated the Disaster Recovery Plan (DRP)
d. The IT team demonstrated the Disaster Recovery Plan (DRP)**,** and management demonstrated the Business Continuity Plan (BCP)

Ans d

Question 8:

Which of the following is a primary requirement for financial institutions under the Gramm-Leach-Bliley Act (GLBA) regarding customer data?

a. To publicly disclose all customer account balances in a quarterly directory.
b. To ensure the security and confidentiality of customer non-public personal information.
c. To share customer financial data with unaffiliated third parties by default.
d. To destroy all customer financial records after one year of inactivity.

Ans b

Question 9:

Which of the following is not considered a primary problem or objective addressed by computer forensics?

a. Recovering data from computers while preserving evidential integrity
b. Finding significant information in a large volume of electronic data
c. Altering recovered data to better suit a specific court argument
d. Presenting the information to a court of law

Ans c

Question 10:

Which of the following is one of the leading Unified Threat Management (UTM) vendors?

a. Fortinent
b. McAfee
c. Trend Micro
d. Symantec

Ans a

NPTEL Online Certification Courses

Indian Institute of Technology Kharagpur

Management Information Systems

Assignment- Week 12

TYPE OF QUESTION: MCQ/MSQ

Number of questions: **10**

MCQ Questions

Question 1:

Which of the following is not a characteristic of a global organization?

a. Large-scale operations
b. A large number of middlemen
c. Multi-Language, Mono-Cultural
d. High risk

Ans c

Question 2:

What is the very first step a firm must take when developing an International Information Systems Architecture?

a. Designing new business procedures and reengineering
b. Understanding the global environment and business drivers
c. Developing the corporate global strategy
d. Selecting the appropriate technology platform

Ans b

Question 3:

GlobalTech Inc. is a global electronics manufacturer. Originally, its US headquarters made all product and marketing decisions, giving overseas branches very little freedom. Recently, the company restructured so that its subsidiaries in Japan, Germany, and India operate as highly integrated yet independent units. These local branches now have the autonomy to design specific products and marketing campaigns tailored to their own cultures, while still sharing global operational efficiencies.

Based on the transition described, which of the following best represents the shift in GlobalTech Inc.'s organizational strategy?

a. From a Domestic Exporter to a Franchiser
b. From a Transnational Corporation to a Multinational Corporation
c. From a Franchiser to a Domestic Exporter
d. From a Multinational Corporation to a Transnational Corporation

Ans d

Question 4:

An international bank's fraud detection engine continuously co-develops algorithms through real-time data sharing between teams in New York, London, and Tokyo. Each global hub simultaneously builds local patches while immediately syncing operational updates across the entire corporate infrastructure to maintain uniform security.

Which systems configuration does this corporate strategy illustrate?

a. Networked
b. Duplicated
c. Centralized
d. Decentralized

Ans a

Question 5:

Which of the following activities falls under the category of “back office functions”?

a. Catering for railway passengers
b. Advisory services for external clients
c. Training and R&D
d. Procurement of raw materials for production

Ans c

Question 6:
